AGRICULTURAL CONSERVATION PROGRAM

CONSERVATION AT ITS BEST
A SOD WATERWAY WHICH WILL HELP STOP BOTH WIND AND WATER EROSION

REBUILDING A QUALITY ENVIRONMENT THROUGH THE AGRICULTURAL CONSERVATION PROGRAM

Americans are becoming increasingly concerned about the quality of their environment. They are distressed to find the air they breathe carries with it dust, exhaust fumes, and chemicals. They are disturbed that many of their once clear streams and lakes are now so polluted that they are no longer safe for swimming, fishing, or as a source of drinking water.

While conservation is as important as ever, no longer is it enough to conserve what we have; we must also restore what we have lost. In recognition of the need to clean up agriculture's contribution to pollution problems and to help in the restoration of the environment, the Agricultural Conservation Program (ACP) offers incentive cost-sharing assistance.

The major purpose of ACP is to improve the quality of life for all people. This will be accomplished by helping farmers and ranchers to prevent or abate agriculture related pollution of water, land, and air; and by conserving agricultural soil, water, woodland, and wildlife resources. ACP is the principal channel through which the Federal Government, in the national interest and for the public good, shares with farmers and ranchers the cost of carrying out approved conservation and pollution abatement practices on their land. ACP puts its priorities on enduring conservation practices which result in the control of erosion, the prevention of siltation, the prevention and abatement of livestock water pollution, and keeping pesticide residues and other agricultural chemicals from polluting the environment. ACP emphasis also is on encouraging farmers to undertake projects they could not--or would not--carry out without cost-sharing assistance.

More people today worry about the silt that washes downstream than about the gully it came from. And we're concerned today with problems such as chemical residues, over-fertilized lakes, and the disposal of livestock wastes. Pressure will continue to build on farmers to eliminate farm-related pollution. ACP will help farmers deal with our changing environmental needs...to keep current with the times...to better serve the needs of the country.

The 1975 ACP provided authority to enter into Long-Term Agreements with interested farmers or ranchers to carry out needed conservation practices. Agreements are for a 3 to 10 year period.

In addition, the Forestry Incentive Program (FIP) was again authorized to provide woodland owners an opportunity to participate in a cost-sharing program to carry out needed forestry practices. Sixteen counties in Washington were designated to offer cost-sharing to eligible participants.

##

PRACTICE SUMMARY - 1975 ACP PROGRAM YEAR

Practice Number	Practice Name	Unit	No. Units	Cost-Shares	No. Farms
RE1	Establishing Permanent Vegetative Cover	Acres	19,827	428,208	914
RE2	Improving Permanent Vegetative Cover	Acres	7,100	42,858	81

FORESTRY INCENTIVES PROGRAM

The Forestry Incentives Program (FIP) was authorized by Congress in 1973 to share the cost of tree planting and timber stand improvement with private landowners. The Federal share of these costs are usually 75 percent, depending upon the cost-share rate set in particular counties by the ASC Committee's.

Landowners participated in the Forestry Incentives Program in 13 counties. These counties were designated on the basis of a Forest Service Survey of total eligible private timber acreage and acreage potentially suitable for production of timber products.

WHY THE PROGRAM WAS STARTED

The demand for wood in this country is expected to exceed the supply within 30 years unless many more trees are planted each year and much more forest land is placed under good forest management. Lands owned by the forest industry and by the public are being planted and improved at the fastest rate possible. But smaller private owners, who control the majority of forest lands in the Nation, do not have the funds to make such long-term investments. Therefore, the Forestry Incentives Program is designed to share this expense with these private, eligible owners.

The following is a summary by designated counties of cost-shares approved and earned:

County	Cost Shares Approved	Cost- Shares Earned
Clallam	3,874	966
Clark	11,000	
Cowlitz	9,231	
Grays Harbor	24,277	
Lewis	13,907	1,247
Mason	4,245	
Pacific	4,179	
Skagit	1,000	
Snohomish	3,394	409
Stevens	8,120	1,207
Thurston	4,547	219
Wahkiakum	1,735	
Whatcom	3,966	3,289
TOTALS	93,475	7,337

WATER BANK PROGRAM

The Water Bank Program was approved by Congress in 1972. The purpose was to preserve, restore, and improve the Wetlands of the Nation, and improve habitat for migratory waterfowl, and other wildlife resources. In addition, the program would reduce runoff, soil and wind erosion, contribute to flood control and improve water quality by reducing stream sedimentation and promote comprehensive and total water management planning.

The outlay of program funds covers 1972 and 1974 Programs. There was no program in 1973.

County	No. Farms	Wetland Acres	Adjacent Acreage	Annual Payments
Douglas	12	213.5	757.2	9,775.30
Spokane	4	82.5	330.0	6,187.50
TOTALS	16	296.0	1,087.2	15,962.50

CROPLAND ADJUSTMENT PROGRAM

The Food and Agriculture Act of 1965 authorized a new Long-Term Cropland Adjustment Program. It is a voluntary program designed to help farmers producing crops in surplus supply to enter into Long-Term Agreements.

Farmers participating remove cropland from production for periods of from five to ten years. The diverted cropland is put to conservation, recreational, and open space uses. The program also emphasizes assistance to farmers, who, because of age, off-farm employment, or other personal adjustment reasons, desire to reduce their farming operations.

Accepted agreements are paid at a rate determined by the crop diverted and in productivity of that crop on the farm. Cost-sharing for carrying out needed conservation uses is allowed at approximately 50 percent of the cost.

Under Greenspan provisions, the program offers local, State and other governmental agencies assistance in acquiring cropland and establishing practices to meet their open space needs.

In 1975 agreement holders were authorized to hay and/or graze their CAP acreage and accept a 15 percent reduced program payment.

Twenty nine contracts are still in effect. Annual adjustment payments for 1975 amounted to \$25,084.

Producers could enter into contracts during the sign-up period held in 1966 and 1967.

ED FROBERG, PROGRAM SPECIALIST,
INSPECTING A COLONY OF BEES. THOSE SPECKS ARE SOME VERY
ANGRY BEES SHOWING THEIR DISPLEASURE AT BEING DISTURBED.

The honeybee is necessary to our national economy for the pollinization of all fruits, fresh vegetables, common seed crops, and for the production of honey.

Section 804 of the Agricultural Act of 1970 authorizes the Secretary of Agriculture to make indemnity payments to beekeepers who, through no fault of their own, suffered losses of honeybees due to the application of Federally approved pesticides. This Authorization was extended by the passage of the Agriculture and Consumer Protection Act of 1973 and has been extended through December 31, 1977.

It is the responsibility of the beekeeper to document the extent of his losses resulting from an application of Federally approved pesticide near or adjacent to his apiary.

The damage to colonies are inspected by qualified bee inspectors who determine the degree of damage to a beekeeper's apiary. Payments are based on the severity of loss as determined by the bee inspector.

COMPLIANCE

All programs have applicable procedures and regulations with which participating producers must comply. The term "compliance" refers to the actions taken in determining the manner in which producers comply with these procedures and regulations. Through compliance operations, facts and figures are developed for use by county committees in determining a producer's eligibility to share in program benefits. These compliance operations are performed by both county and State personnel.

Specific training goals are developed with a primary purpose of improving all phases of compliance operations. This includes employee performance and improved service to program participants. Individual training was provided by CED's for all county office personnel working with the Compliance Program. A training plan was developed for use if a disaster situation should arise.

Measurement service was provided on an "actual cost" basis to producers requesting acreage or bin measurements. Participating producers requesting service were furnished "guaranteed measurements" providing they stay within the staked area and comply with other Program requirements. The productivity of offered set-aside as related to the rest of the farm was also determined. Measurement services were performed on 95 farms during 1975.

Producers certify Program or crop acreages by established dates, after which farms are picked at random by computer for spot checking. These farms are then visited and required acreages measured. Accuracy of producer certification is compared with measured acreage in determining program compliance. In 1975, approximately 850 farms were spot checked by county office personnel, and 58 spot checks were performed by State office personnel to determine various Program compliance.

1975 WHEAT AND FEED GRAIN PAYMENTS

The 1975 Wheat and Feed Grain Programs were in operation for the second year under the Agriculture and Consumer Act of 1973, which expires in 1977.

Wheat and Feed Grain allotments did not represent a limit on the acreage of the crop that could be planted, and there were no set-aside and conserving base requirements. The Programs were divided into two types of payments: (1) disaster payments and (2) deficiency payments.

Disaster Payments. Disaster payments were made to producers who suffered a crop loss for prevented planting and low yield because of a natural disaster or a cause beyond the producer's control. To be eligible for an abnormally low yield payment, the total actual production for a crop must have been less than two-thirds of the farm allotment (or planted acres if smaller) times the disaster program yield. The payment was computed on a quantity equal to the difference between the payment yield times the farm allotment (or planted acres, if smaller) and the total actual production. For prevented planting, the payment was computed on the basis of the farm's payment yield times the allotted acres on which the planting was prevented minus the acres of non-conserving crops planted on the farm. The maximum amount of disaster and deficiency payments a person may receive under the wheat, feed grain, and cotton programs combined was \$20,000.

Deficiency Payments. Target prices were set by Law and were established at \$2.05 for wheat, \$1.38 for corn, \$1.31 for grain sorghum, and \$1.13 for barley. Payments known as deficiency payments would have been made in the event that the National average market prices received by farmers were below the established target prices. Payments would have been based on the difference between the higher of the National average market price, or the loan rate and the established target price times the allotment times the farm yield. Loans were available on the total production of the farm at the National average rate of \$1.37 for wheat, \$1.10 for corn, \$1.05 for grain sorghum, and \$.90 for barley. No deficiency payments were made to farmers under the 1975 Wheat and Feed Grain Programs.

1974 AND 1975 WOOL PROGRAMS

The Wool Program is an incentive program to encourage an annual domestic production of approximately 300 million pounds of shorn wool. To encourage this production, payments on shorn wool are based on the percent needed to bring the average return received by all producers up to a certain support level.

The support on shorn wool for the 1974 and 1975 Programs was 72 cents per pound. The percentage rate for 1974 was 21.8, and for 1975 it was 61.1 . For unshorn lambs, the rate for 1974 was 52 cents per hundred pounds of live weight and for 1975 it was \$1.09 per hundred pounds of live weight.

Deductions of $1\frac{1}{2}$ cents a pound from shorn wool payments and $7\frac{1}{2}$ cents per hundred pounds of live weight were made for promotion fund deduction for both years.

These deductions were provided in a referendum approved by sheep producers with an 85.5% favorable vote. Deductions are paid to the American Sheep Producers Council, Inc. for advertising, sales promotion, and related market development activities.

ADMINISTRATIVE OPERATIONS - 1975

Washington State is divided into 39 local administrative counties. Farmers within each county annually elect committeemen to administer USDA action programs. To assist them in this function, each office is supervised by a County Executive Director. In seven instances, one office functions for two county committees. The 32 county offices are staffed by 38 full-time employees in addition to the executive director. Part-time help is utilized during busy seasons of the year, primarily for compliance purposes.

Disbursement during 1975 by these offices, to some 6,431 program participants on Commodity, Conservation, Emergency Conservation Measures, Bee Indemnity and Wool Programs amounted to \$4,367,669. Also, 425 commodity and farm storage loans in the amount of \$6,209,391 were disbursed by the county offices. Administrative expenses for this period amounted to \$1,327,250.

Under the 1975 Emergency Herd Preservation Program, there were 42 eligible participants who purchased 345 tons of hay in the amount of \$27,539 to maintain foundation herds. This program was initiated due to the flood which occurred in December 1975 in western Washington counties.

In our constant search for greater administrative efficiency, much of the routine work in these offices is being automated. This has enabled us to process a substantially greater workload with fewer employee man-days. Our constant goal is striving for better service to farmers at a lower cost.

U. S. AGRICULTURAL SERVICE CENTERS

In November 1973 the Secretary of Agriculture, by Memorandum #1492 (Revised) created a nation-wide program within USDA to establish U.S. Agricultural Service Centers at the local field office level.

Departmental objectives for this Program were established to:

- (1) Develop a system of U.S. Agricultural Service Centers providing the fullest possible range of services to USDA client groups at a "one-stop service" single location;
- (2) Locate the Center near market areas where farmers and other rural residents conduct business;
- (3) Consider possible elimination of marginal effective USDA field offices;
- (4) Provide Agencies' sharing a common entrance, as well as office equipment and personnel.

Implementation was assigned to the Office of Operations, USDA, Washington, D.C., which developed guidelines for establishment of Centers. Guidelines identified principal Agencies considered for inclusion in the Centers--ASCS, SCS, FmHA, and FCIC--and, where possible, local Extension Service personnel.

Responsibility for implementation of policies and plans were assigned to the State Administrative Committee. This Committee in each State consisted of the State Agency Head for ASCS, FmHA, SCS, and FCIC. The SAC, working through the County Administrative Committee, which was composed of the same Agency heads at the county level, recommended and received approval for Service Center sites in the State of Washington as follows:

<u>COUNTY</u>	<u>CITY</u>	<u>TARGET DATE FOR COMPLETION</u>
Yakima	Yakima	Completed 12/1/75
Lewis	Chehalis	Completed 4/1/76
Spokane	Spokane	12/31/76
Kitsap	Port Orchard	7/1/76
Stevens	Colville	8/31/76
Kittitas	Ellensburg	8/31/76
Grant	Ehhrata	12/31/76
Snohomish	Lake Stevens	8/31/76
Grays Harbor	Montesano	8/31/76
Okanogan	Okanogan	12/31/76
